Legacy Dmg Conversion Center

Applies to: System Center Configuration Manager (Current Branch) This article describes how to deploy and maintain the Configuration Manager client on Mac computers. When you install a new client for Mac computers, you might have to also install Configuration Manager updates to reflect the new client information in the Configuration Manager console. You can't use custom client settings. To request and install the certificate, the Configuration Manager client for Mac requires the default client settings. Support families in DuPage and other collar Convert a disk image to another format using Disk Utility on Mac. To learn about what you have to configure before deploying clients to Mac computers, see Prepare to deploy client software to Macs.

Then configure the Management site code Select the Configuration Manager primary site that contains the management points for these Mac computers. For example, use the FQDN of the management point server Configure client settings Use the default client settings to configure enrollment for Mac computers. Note If you can't select the site, make sure that you configure at least one management point in the site to support mobile devices. You can convert the image format and encryption of a disk image For example, if you create a read/write disk image but later want to prevent changes to the image, you can convert it to one of the read-only disk image formats. In the Configuration Manager console, go to the Administration workspace Select the Client Settings node, and then select Default Client Settings. In these procedures, you have two options for installing client certificates Read more about client certificates for Macs in Prepare to deploy client software to Macs. Important To deploy the client to devices running macOS Sierra, correctly configure the Subject name of the management point certificate. On the Home tab of the ribbon, in the Properties group, choose Properties Select the Enrollment section, and then configure the following settings: Allow users to enroll mobile devices and Mac computers: Yes Enrollment profile: Choose Set Profile. Use Configuration Manager enrollment by using the CMEnroll tool The enrollment process doesn't support automatic certificate renewal. In the Mobile Device Enrollment Profile dialog box, choose Create In the Create Enrollment Profile dialog box, enter a name for this enrollment profile.
